

Gain Valuable Data Insights

SAP Predictive Asset Insights (PAI)

What does SAP PAI provide?

SAP Predictive Asset Insights (PAI) is an S/4HANA or ERP integrated Software-as-a-Service application that remotely monitors the health of your assets. Leveraging machine learning models trained on sensor data, PAI will automatically raise alerts based on an anomaly score if the machine health violates a predefined threshold. Evora connects sensors to the PAI platform and defines rules to create alerts, enhancing your operational maintenance with data insights.

The Advantage

Improve first visit fix rate and maintenance request quality.

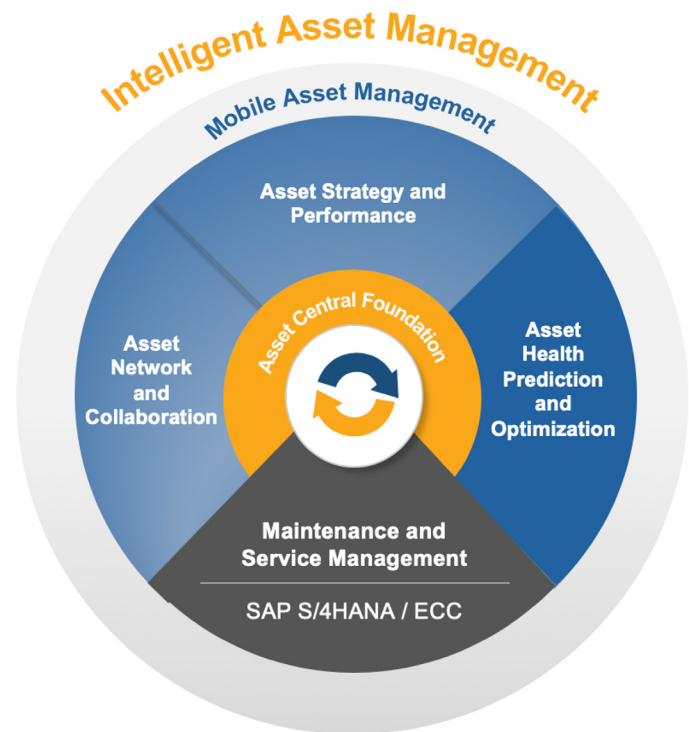

Improve the equipment effectiveness.

Gain real-time insights on machine performance and critical assets.

Setup, Configuration & Integration

- Enablement workshop
- Configuration with SAP ERP or S/4HANA
- Backend integration
- Coaching & support
- Configure predictive model
- Connect device or asset simulator
- Test function & business process integration
- Define rules
- Analyze alerting & time series
