

EvoSuite - Performance Overview

Business Intelligence for your Maintenance with SAP Analytics Cloud

You are probably basking in a gold treasure without leveraging it. But how? Data is the gold of digitization, it just needs to be used properly. When you manage maintenance processes with SAP, you collect a lot of data - about the orders, operations, time bookings, components, technicians as well as costs.

In the past, generating knowledge from this data required complex data warehouse software, expensive data scientists and a lot of time. We can shorten the road to the intelligent maintenance objective for you. With EvoSuite, a huge amount of information from your SAP EAM system is available for evaluation. And with AI support from SAP Analytics Cloud (SAC), you can use a wide range of reports out-of-the-box. You don't need to wait for a S/4HANA migration to easily answer questions like these:

Investigate the most used equipment in the work orders to identify which are critical

Which technicians are under/overplanned? Find out how to optimize the workload.

How do planned operating hours relate to the time actually required? Are there any deviations?

Analyze the most expensive orders to improve the estimation of costs

Analyze the categories of components. What quantities of material were used?

2-3 Hours | Workshop

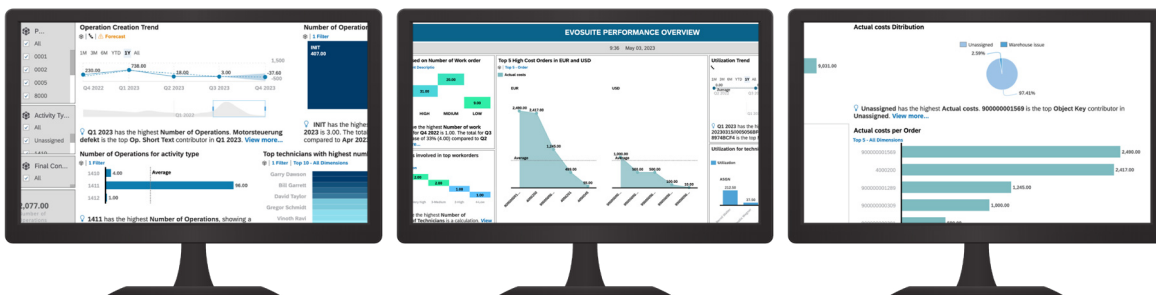

We discuss your requirements and examine the options together.

5 Days | Implementation

Within a maximum of 5 days, we implement the EvoSuite Analytics Add-On and set up the SAP Analytics Cloud.

3 Months | Test Operation

The 90-day trial license from SAP allows you to test the system thoroughly without any risk. Put possible scenarios into practice and identify potential benefits!
